Introduction

- Online shopping is the process whereby consumers directly buy goods or services from a seller in real-time, without an intermediary service, over the Internet. It is a form of electronic commerce.
- This project is an attempt to provide the advantages of online shopping to customers of a real shop.
- It helps buying the products in the shop anywhere through internet by using an android device. Thus the customer will get the service of online shopping and home delivery from his favorite shop.
- This project is a web based shopping system for an existing shop. The project objective is to deliver the online shopping application into android platform.

Problem Statement

- As online shopping became a trend nowadays the regular shops are losing their customers to online brands. Customers have effortless shopping experience and saving time through shopping online. For competing with those online brands , If shops are providing an online portal where their customers can shop through internet and get the products at their doors it will increase the number of customers.

PROPOSED SYSTEM

System Requirements

Hardware Requirement:

- Computer System: Windows, Mac
- Processor: Intel i5 6th Gen
- Ram: 4GB

Software Requirement:

- VS Code
- Xampp
- My SQL

Conclusion

- The project entitled Online shopping system was completed successfully.
- The system has been developed with much care and free of errors and at the same time it is efficient and less time consuming. The purpose of this project was to develop a web application and an android application for purchasing items from a shop.
- This project helped us in gaining valuable information and practical knowledge on several topics like designing web pages using html & css, usage of responsive templates, designing of android applications, and management of database using mysql . The entire system is secured.
